

**THE BELMONT HOUSE**  
*CHICAGO, IL*

**Challenges**

- Renovation of the lobby required ILC to create a fresh, clean modern environment.
- Create a dynamic lighting effect that can be light and airy during the day and bright and energetic at night.
- Create an elegant effect on a limited budget.

**Design**

- Add frosted glass elements to the very traditional space to keep in the style of the classic design while creating a fresh, new look.
- Incorporate a combination of color changing and white LED lights to keep costs down.
- Use color changing effects to draw in prospective residents and provide current residents with an exciting environment.

**Solutions**

- Worked with the architect to specify the most cost-efficient solutions to create the desired effect.
- Advised the builder and millworker on how to create elements that would enhance the lighting effects.
- Created elegant and sophisticated "Moods" that slowly change over the course of the week.
- Programmed other options for more dynamic effects to be used for special occasions.
