

**EVENT SOLUTIONS  
LAS VEGAS, NV**

**Challenges**

- Transform a stark white tent into an Aztec environment.
- Construct flame on top of a 15' tower.
- Impress and excite event professionals

**Design**

- 3-D flame created with Martin LC LED panels.
- (34) intelligent lighting fixtures to paint ceiling with color and texture throughout the show.
- (50) LED uplights used in conjunction with media server to make walls flicker as if lit by center flame.
- (48) conventional fixtures for various gobo and pattern projections.
- Over 400' of black truss hung in a zig-zag pattern which achieved superior lighting positions and complemented décor.

**Production**

Starting with the zig-zag truss, this lighting system provided enough impact to grab the attention of seasoned event professionals. The entire ceiling of the 100' x 300' tent was colored with intelligent lights and switched between the subtle Aztec theme to a disco during entertainment portions of the event.

The highlight of the show was the 6' tall flame displayed with LED panels situated on top of a 15' tall center structure. Using a media server, ILC pixel mapped the flame video onto the uplights to have the walls appear as if lit by the center flame.
