

**INTERNATIONAL FESTIVAL OF RACING
METROPOLIS BALLROOM, ARLINGTON HEIGHTS, IL**

Challenges

On a limited budget, Intelligent Lighting Creations was challenged with the task of providing general room illumination and a lighting design which had to have the ability to create and enhance different moods throughout the entire event.

The room was lined with various soft white fabric elements and ILC had to light the entire room with limited power and rigging options.

Design

- (6) Pixel Par 90 LED fixtures hung inside cones that acted as chandeliers for the room.
- (10) Pixel Par 90 LED fixtures up lighting various fabric elements around the room.
- (8) Pixeline 110ec LED strip lights to up light fabric walls.
- (10) ETC Source IV 36° 575W fixtures for stage and food station illumination.

Production

The color changing lighting system allowed the flexibility to transform the entire space and create unique looks throughout the entire production.

ILC overcame the challenges of limited electricity by using low powered LED fixtures which provided exciting visual effects without the need of external power generators.
